Listings contained in this directory reflect responses obtained from a mail-in survey to New Jersey based seafood suppliers in the summer of 1989. Only the suppliers who responded were included in this book, thus, this listing does not contain all New Jersey Seafood Suppliers. New Jersey Seafood Suppliers who were omitted from this volume should use the form in the back to communicate their interest in being included in future issues.

## *A Word About the New Jersey Seafood Industry*

New Jersey is proud to be one of the leading commercial fishing states of the United States. In 1988, our commercial fishermen harvested over 116 million pounds of fish and shellfish. Topping the fish list were flounder, tilefish, tuna, swordfish, scup and whiting, and the principal species on the shellfish list were surf clams, sea scallops, ocean quahogs, hard clams, blue crabs and lobsters. In addition, we harvest many species which are of special significance to the export market such as *Illex* and *Loligo* squid, butterfish, mackerel and red hake.

Our fishing fleet and our ports are equipped with the latest technology to assure a quality product. In addition, New Jersey is the home of a substantial number of seafood dealers and processors with the ability and capacity to distribute product to both the domestic and export market. New Jersey also has a growing aquaculture industry. Products include clams, soft shell crabs and tilapia.

The size and diversity of the New Jersey seafood industry is only part of the story. Almost the entire shellfish harvest is sold in processed form and is available to markets all over the world. Although much of the finfish landed is sold as fresh product, New Jersey has the capability to process and ship its harvest to distant markets.

In addition, because of our proximity to the large New York metropolitan market, our fish industry utilizes many fresh and saltwater species that are harvested beyond the borders of the State. Furthermore, the ethnic composition of the metropolitan area results in a New Jersey processing industry that is knowledgeable about food tastes, and has the capability of satisfying these tastes.

New Jersey is the ideal place for you to look for a wide variety of fishery products, where both your quantity and quality needs can be met, and where the potential to meet expanding needs exists.

Six major and modern fishing ports, as well as numerous smaller ports, thrive along the New Jersey coastline. Belford is the most northern of the fishing ports in the state and provides the dockage and facilities for over 120 commercial boats. Some of the more important species landed in Belford include silver hake, American lobster, red hake, summer flounder, grey sea trout, butterfish, tautog, bluefish, hard and soft clams, and blue crabs. This port also has great potential for the harvest of squid, Jonah, rock and red crabs, Atlantic mackerel and dogfish.

Point Pleasant not only provides dock space and modern facilities for about 100 commercial fishing boats, but also supports the state's largest recreational fishing fleet. Important species include American lobster, sea scallops, silver and red hake, ocean quahogs, Atlantic mackerel, butterfish, summer flounder, sea bass, tautog, scup, tuna, tilefish, and swordfish. Squid along with Jonah and rock crabs offers the best potential for expansion.

Barnegat Light is a beautiful small community located on a barrier island which is famous for its fine beaches. The commercial fishery at this port is primarily a longline fishery targeting such species as tilefish, bigeye tuna, yellowfin tuna, bluefin tuna, albacore tuna, and swordfish. Several inshore species such as hard clams, and blue crabs are also important to this area. Approximately 30 ocean going vessels and numerous inshore boats utilize this port and its facilities year-round.

Atlantic City is undoubtedly better known for its casinos and seaside tourist attractions, but it is also a valuable commercial port. This port's major fisheries include surf clams, ocean quahogs, summer flounder, sea bass, sea scallops, swordfish, hard clams and blue crabs.

Cape May is New Jersey's largest commercial fishing port and the fourth largest on the east coast. It has 12 major docks which handle up to 150 fishing vessels. Major species landed include grey sea trout, summer flounder, winter flounder, Atlantic mackerel, scup, sea bass, bluefin tuna, skipjack tuna, yellowfin tuna, surf clams, ocean quahogs, sea scallops and squid. Some 36 other species are available in lesser quantities. A number of successful joint ventures for both squid and Atlantic mackerel have been conducted from this port.

Port Norris is a bay oriented fishery supporting some 500 active fishermen. The port's major species include oysters, blue crabs, and grey sea trout.

The ports of Newark, Elizabeth, Camden and Salem offer some of the best shipping facilities on the east coast. Major international airports also exist in Newark, New York City and Philadelphia. No New Jersey fishing port is more than ninety minutes from one of the major airports. This assures that New Jersey fish arrives fresh worldwide.

A handwritten signature in black ink, reading "Arthur R. Brown, Jr." The signature is fluid and cursive, with a long, sweeping line extending from the end of the name.

Arthur R. Brown, Jr.  
Secretary of Agriculture

## ALBACORE TUNA

**SCIENTIFIC NAME:** *Thunnus alalunga*

### COMMON NAMES:

English	—	Albacore tuna, longfin tuna
German	—	Weisser Thun
Spanish	—	Albacore, atun blanco
Italian	—	Tonno bianco, alalonga
Japanese	—	Binnagamaguro, binnaga, bincho, tombo
French	—	Germon

Albacore is the most valuable species in the canning industry. Only albacore can be marketed as white meat. It is excellent on the grill or broiled, and there is no need to brine the fish prior to cooking. Although albacore is important to the sportsfishing sector, there is no major commercial harvest.

**DISTRIBUTION:** Continental shelf, continental slope and open ocean waters.

**SIZE:** Maximum weight 100 lbs. (45 kg). Usually about 30 to 50 lbs. (13-23 kg).

### EDIBILITY PROFILE:

**PRODUCT FORMS:** Fresh; gutted, headed and gutted, fillets. Frozen; gutted, headed and gutted, fillets. Canned.

**AMERICAN EEL**

**SCIENTIFIC NAME:** *Anguilla rostrata*

**COMMON NAMES:**

- English — American eel, silver eel, eel
  - German — Amerik, Aal
  - Spanish — Anguila americana
  - Italian — Anguilla americana
  - Japanese — 鰻 *Unagi*\*
  - French — Anguille américaine
- \*general term

The American eel lives in fresh water and returns to the sea to spawn. The eel is elongated and snakelike in appearance. Its dorsal fin originates far behind its pectorals and it has a pointed snout with a large mouth. The eel's color varies with its habitat and season, and ranges from gray to olive to black. The eel is more popular in Europe and Japan than the United States, and is a popular holiday food. The meat of eel has a very firm texture, high fat content and full flavor. It is grayish in the uncooked state but turns white with cooking.

**DISTRIBUTION:** Freshwater lakes, ponds, streams and rivers; oligohaline to polyhaline zones of estuaries and bays; nearshore coastal waters.

**SIZE:** Maximum length 4ft. (122 cm), weight to 16 lbs. (7.2 kg).

**EDIBILITY PROFILE:**

**PRODUCT FORMS:** Fresh; whole, headed and gutted. Frozen; whole, headed and gutted, smoked.

## AMERICAN LOBSTER

**SCIENTIFIC NAME:** *Homarus americanus*

**COMMON NAMES:**

English	—	American lobster, northern lobster, lobster
German	—	Hummer
Spanish	—	Bogavante, lubrigante
Italian	—	Astice
Japanese	—	ロブスター <i>Robusutaa</i>
French	—	Homard

Contrary to popular belief, the New Jersey lobster is exactly the same as the product harvested off the coast of Maine. As a matter of fact, many aficionados consider the New Jersey lobster sweeter and better tasting. Lobsters weigh anywhere from one to five pounds, but can grow up to forty-five pounds. New Jersey draggers have been known to get the monsters in off-shore canyons exceeding six hundred feet in depth. Lobsters prefer cold deep waters and rocky areas. Available year round, lobsters are more likely to be caught in New Jersey's inshore waters out to the edge of the continental shelf, April through November. Considered a delicacy, lobster meat is sweet, white and exceptionally tender.

**DISTRIBUTION:** Continental shelf, upper continental slope, nearshore coastal waters, bays, and coves.

**SIZE:** Average length 10 inches (25 cm); weight 1-1/2 to 2 lbs. (.7–.9 kg).

**PRODUCT FORMS:** Fresh; whole. Frozen; whole, shucked cooked meat.

## ATLANTIC BONITO

**SCIENTIFIC NAME:** *Sarda sarda*

### COMMON NAMES:

English	—	Atlantic bonito, skipjack, horse mackerel
German	—	Pelamide
Spanish	—	Bonito
Italian	—	Palamita
Japanese	—	鰹 <i>Katsuo</i> *
French	—	Bonite `a dos rayé *general term

The Atlantic bonito is in the same family as the mackerel and tuna. Bonito travel in schools, and feed on small finfish and squid. They are caught by commercial and recreational fishermen. The meat is dark, flavorful and rich in oil.

**DISTRIBUTION:** Nearshore coastal waters, continental shelf.

**SIZE:** Maximum length 3 ft. (92 cm), weight 12 pounds (5.4 kg).

### EDIBILITY PROFILE:

**PRODUCT FORMS:** Fresh; gutted, fillets. Frozen; gutted, fillets.

## ATLANTIC MACKEREL

**SCIENTIFIC NAME:** *Scomber scombrus*

### COMMON NAMES:

English	—	Atlantic mackerel, Boston mackerel
German	—	Makrele
Spanish	—	Caballa
Italian	—	Maccarello, sgombro
Japanese	—	さば まらさば <i>Saba, Marasaba</i>
French	—	Maquereau bleu

Atlantic mackerel migrate in the open sea, heading coastward in the warm weather and away to deep water in the winter, when they become inactive. They are pelagic and travel in schools of similar size fish. Mackerel eat small finfish, squid and pelagic crustaceans. The smaller fish are often called tinkers. Mackerel are considered prime eating when they are the fattest which is usually during the fall months. The meat is rich in oil, dark colored and soft textured. Mackerel are fished by both recreational and commercial fishermen. Commercial gear includes gillnets, pound nets, floating traps, purse seines and otter trawls.

**DISTRIBUTION:** Continental shelf

**SIZE:** Maximum length 2 ft. (61 cm); average length 14–18 inches (36–46 cm); average weight 1 to 2-1/2 lbs. (.45–1.2 kg).

### EDIBILITY PROFILE:

FLAVOR intensity	MILD	• • • • •	•	STRONG
FAT content	LOW	• • • • •	•	HIGH
ODOR, raw-fresh	MILD	• • • • •	•	STRONG
COLOR after cooking	WHITE	• • • • •	•	DARK
FLAKINESS	FLAKY	• • • • •	•	NOT FLAKY
FIRMNESS	FIRM	• • • • •	•	NOT FIRM
COARSENESS	SMOOTH	• • • • •	•	COARSE
MOISTURE content after cooking	DRY	• • • • •	•	WET

**PRODUCT FORMS:** Fresh; whole, headed and gutted, fillets. Frozen; whole, headed and gutted, fillets. Strong potential for canned. Potential for frozen blocks.

**ATLANTIC POLLOCK**

**SCIENTIFIC NAME:** *Pollachius virens*

**COMMON NAMES:**

- English — Boston bluefish, pollock  
coalfish, green cod
- German — Kohler, Seelachs
- Spanish — Palere, faneca plateada,  
carbonero, bacoloa perro
- Italian — Merluzzo ueto, merluzzo  
carbonaro
- Japanese — ポラック *Porakku*
- French — Lein noir, colin

Atlantic Pollock are distinguished from their cod cousins by their greenish hue. They are olive green to greenish brown above and have silvery to gray shades on the belly. The body is deep, tapering to a pointed nose and a slender tail section. Pollock average 4 to 15 pounds, but can reach 40 pounds. They pursue pelagic crustaceans and small finfish as food. Pollock are a common sport fish and a very important commercial fish. They are commercially harvested by trawl and gillnet and the highest landings occur during the fall when these fish concentrate prior to spawning. The meat of pollock is delicate in texture and off-white in color, but lightens as it cooks.

**DISTRIBUTION:** Continental shelf and nearshore coastal waters.

**SIZE:** Length: 40 inches; weight: 30 pounds.

**EDIBILITY PROFILE:**

**PRODUCT FORMS:** Fresh and frozen; whole, headed and gutted, fillets

**BIGEYE TUNA**

**SCIENTIFIC NAME:** *Thunnus obesus*

**COMMON NAME:**

- English — Bigeye tuna
- German — Grossäugiger thun
- Spanish — Patudo
- Italian — Tonno obeso
- Japanese — 目鉢 眼撥 *Mebachi*
- French — Thon obese

The bigeye can weigh up to 500 pounds but most commercially harvested fish are between 20 and 100 pounds. Most local product is exported to Japan where it is known as mebachi. It is also very popular in Portugal.

**DISTRIBUTION:** Open ocean waters, continental slope.

**SIZE:** Up to 400 lbs. (180 kg).

**EDIBILITY PROFILE:**

**PRODUCT FORMS:** Fresh; gutted, fillets or steaks. Frozen; gutted, fillets or steaks. Canned.

## BLACK SEA BASS

**SCIENTIFIC NAME:** *Centropristes striatus*

### COMMON NAMES:

English	—	Black sea bass, sea bass, blackfish
German	—	Schwarzer zachenbarsch
Spanish	—	Mero
Italian	—	Perchia striata
Japanese	—	すずき <i>Suzuki</i>

Sea bass prefer rocky areas and move inshore and offshore seasonally. They tend to spend the spring and summer in coastal waters, while moving offshore in cooler months. Commercially they are harvested with modified lobster pots as a targeted trap fishery. They feed chiefly on crab, lobster, shrimp and mollusks. Some black sea bass are also harvested by otter trawl.

**DISTRIBUTION:** Inner continental shelf, nearshore coastal waters, and mesohaline and polyhaline zones of estuaries.

**SIZE:** Maximum length 2 ft. (61 cm); weight 8 pounds (3.6 kg); average weight 1-1/2 lbs. (.7 kg).

### EDIBILITY PROFILE:

**PRODUCT FORMS:** Fresh; whole, headed and gutted, fillets. Frozen; whole, headed and gutted, fillets.

## BLUE CRAB

**SCIENTIFIC NAME:** *Callinectes sapidus*

**COMMON NAMES:**

English	—	Blue crab, blue claw crab
German	—	Blaukrabbe
Spanish	—	Cangrejo azul
Italian	—	Granchio nuotatore
Japanese	—	Gazami
French	—	Crabe bleu

Native to New Jersey waters, the blue crab is well known by seafood fanciers. Blue crabs are capable of swimming and their scientific name, *Callinectes*, means "beautiful swimmer". They inhabit saltwater, as well as freshwater, but are found predominantly in brackish bays and estuaries. Blue crabs spend the cold winter months in deep water and move into the warmer, shallower, waters in the spring and summer. Blue crabs are landed in both the hard and soft-shell state. Most of the meat from the blue crab comes from the body and is rich and sweet tasting. Recreationally and commercially, the blue crab is one of the shore's most popular catches.

**DISTRIBUTION:** Throughout bays and estuaries.

**SIZE:** Average carapace with 4–7 inches (10–18 cm).

**PRODUCT FORMS:** Fresh; whole. Frozen; whole, shucked cooked meats, soft shelled.

## BLUEFIN TUNA

**SCIENTIFIC NAME:** *Thunnus thynnus thynnus*

### COMMON NAMES:

English	—	Bluefin tuna, tunny, horse mackerel
German	—	Roter thun
Spanish	—	Atún (rogo)
Italian	—	Tonno
Japanese	—	本まぐろ <i>Honmaguro</i>
French	—	Thon rouge

The bluefin tuna is the most common tuna in the northeast. It is so large that it is sometimes called the horse mackerel and can reach weights up to 1,500 pounds. The fish has a very high metabolic rate and can often reach body temperatures warmer than the surrounding water. If not harvested carefully, the quality of the flesh can be impaired by the high body temperature. The meat of the bluefin is stronger than most other tunas and is often sold to the Japanese market for sushi and sashimi. Most of the local harvest is exported. Fresh bluefin should be brined before cooking.

**DISTRIBUTION:** Continental shelf, continental slope and open ocean waters.

**SIZE:** Maximum length 14 ft. (427 cm), weight 1600 lbs. (720 kg); 1000 lbs. (450 kg) not rare.

### EDIBILITY PROFILE:

**PRODUCT FORMS:** Fresh; gutted, fillets or steaks. Frozen; gutted, fillets or steaks. Canned.

**BUTTERFISH**

**SCIENTIFIC NAME:** *Peprilus triacanthus*

**COMMON NAMES:**

- English — Butterfish, dollarfish, shiner, skipjack
- German — Amerikanisher butterfisch
- Spanish — Pampano
- Italian — Fieto
- Japanese — いぼだい レナ *Ibodai, Shizu*
- French — Stromatée `a fossettes

The larger size butterfish command the highest prices. They travel in loose schools and are distributed throughout the water column. They feed on small finfish, squid and crustaceans. They are harvested by trawl, trap and purse seine. The meat is dark but lightens on cooking, rich in oil and soft textured.

**DISTRIBUTION:** Continental shelf water, nearshore coastal waters and bays.

**SIZE:** Average length 6–9 inches (15–23 cm); weight 2–5 ounces (56–140 gm).

**EDIBILITY PROFILE:**

**PRODUCT FORMS:** Fresh; whole, headed and gutted. Frozen; whole, headed and gutted.

## COD

**SCIENTIFIC NAME:** *Gadus morhua*

**COMMON NAMES:**

English	—	Cod, codfish
German	—	Kabeljau, dorsch
Spanish	—	Bacalao
Italian	—	Merluzzo bianco
Japanese	—	鱈 真鱈 <i>Tara, Madara</i>
French	—	Cabillaud, morue

Cod have been the backbone of the commercial fishery in America ever since the New World was discovered. Henry Hudson and John Cabot chronicled the abundance of cod in the waters as a main attraction to explorers and settlers alike. In some areas, cod migrate extensively but are stationary in others. Movements are in response to spawning, pursuit of food, or seasonal temperature changes. Where seasonal migrations take place, they are generally to the south or inshore during the fall and then offshore or north to avoid warmer summer temperatures. It is only during the winter that cod are found in New Jersey waters. They feed on small finfish, crustaceans and mollusks.

The meat is white, mild flavored and medium textured. Small cod are sometimes marketed as scrod.

**DISTRIBUTION:** Coastal waters, continental shelf, continental slope.

**SIZE:** Average under 75 pounds; biggest recorded over 200 pounds.

**EDIBILITY PROFILE:**

**PRODUCT FORMS:** Fresh and frozen; whole, gutted, fillets, steaks; processed as breaded fillets and fishcakes.

**GREY SEA TROUT**

**SCIENTIFIC NAME:** *Cynoscion regalis*

**COMMON NAMES:**

- English — Grey sea trout, weakfish, squeteague, sea trout
- Spanish — Corbina
- French — Acoupa Royal

One of the most popular tavern items in Revolutionary War times, grey sea trout were so plentiful in the Atlantic, they were netted like herring until the late 1800's. By the turn of the century, sea trout had nearly disappeared, and didn't return in force until five decades later. Today, one of the largest populations of grey sea trout is found right off the coast of New Jersey. Grey sea trout migrate in spring and summer. Also known as weakfish because of their weak mouth muscles, grey sea trout are good fighters. Sea trout are members of the drum family and males can produce a drumming sound. They are harvested mainly by trawl net. The meat is off-white, light textured and mild flavored.

**DISTRIBUTION:** Nearshore coastal waters, bays and estuaries.

**SIZE:** Maximum weight 30 lbs. (13.5 kg); average length 14–26 inches (36–66 cm), weight 6–10 lbs. (2.7–4.5 kg).

**EDIBILITY PROFILE:**

**PRODUCT FORMS:** Fresh; whole, headed and gutted, fillets. Frozen; whole, headed and gutted, fillets.

## **HARD CLAM**

**SCIENTIFIC NAME:** *Mercenaria mercenaria*

**COMMON NAMES:**

English	—	Hard clam, quahog
German	—	Sandklaffmuschel
Spanish	—	Almeja*
Italian	—	Vongole
Japanese	—	Nimaigai
		*general term

The hard clam has an off-white, oval shaped shell with a purple or violet border. Hard clams are marketed according to size and are usually sold in three size categories. Littlenecks are the smallest, tenderest and most expensive of the size categories. They are usually steamed or eaten raw on the half shell. Cherrystones are next in size and are usually used for baked clam appetizers, steamed or eaten raw. The largest, toughest and least expensive are the chowder clams. As their name implies, they are usually chopped and used in chowder, as well as fritters and other processed products.

**DISTRIBUTION:** Bays, coves and high salinity estuarine areas.

**SIZE:** Average size 1-1/2–5 inches (3.8–13 cm).

**PRODUCT FORMS:** Fresh; whole. Frozen; whole, shucked.

## JONAH OR ROCK CRABS

**SCIENTIFIC NAME:** *Cancer borealis*, *Cancer irroratus*

### COMMON NAMES:

English	—	Jonah crab, rock crab, sand crab, white legger
German	—	Kurzschwanz – krebs
Spanish	—	Congrejo*
Italian	—	Granchio*
Japanese	—	かに <i>Kani</i> *
French	—	Crabe*
		*general term

The Jonah crab has an elliptical, rough shell which is convex, brick red above, and yellowish below. Jonah crabs are closely related to the rock crab and the two are often not differentiated in the marketplace. Jonahs grow larger than rock crabs and have more pronounced claws, thicker legs, and a rougher shell. Fully grown crabs measure 6 to 7 inches across and average about one pound in weight. Jonah crabs extend into deeper waters from the coastline to the upper continental slope at depths of 100 to 1300 feet. Larger crabs tend to inhabit the deeper and colder waters. Jonah crabs are sold whole, either live or cooked, and as cooked picked meat. The claws are also marketed and sold as cocktail claws.

**DISTRIBUTION:** Continental shelf and nearshore coastal waters.

**SIZE:** Average carapace width 4–6 inches (10–15 cm).

**PRODUCT FORMS:** Fresh; whole, detached claws. Frozen; whole, detached claws.

## **LITTLE SKATE**

**SCIENTIFIC NAME:** *Raja erinacea (rajidae)*

**COMMON NAME:**

English	—	Little skate
German	—	Rochen
Spanish	—	Raya
Italian	—	Razza
Japanese	—	かじき えい <i>Kasube, Ei</i>
French	—	Raie hérisson

Popular in European cuisine, but relatively unknown in the United States, the skate is a strangely shaped, flat, scaleless fish with winglike pectoral fins and long tail, usually equipped with barbed spikes. Skate is actually the common North American name given to all fish in the Rajidae family and you'll frequently find skate marketed as "rajafish". Skate feed primarily on crustaceans, which accounts for its flesh quality and succulent flavor. Skate can generally be found in our coastal waters spring through fall. Like the searobin, skate is often considered "trash fish" by unsuspecting anglers who aren't aware that skate is not only edible, but actually delicious.

**DISTRIBUTION:** Continental shelf and nearshore coastal waters.

**SIZE:** Average length 2 ft. (61 cm); weight 2 pounds (.9 kg).

**PRODUCT FORMS:** Fresh; whole, wings. Frozen; whole, wings.

## LONG FINNED SQUID

**SCIENTIFIC NAME:** *Loligo pealei*

**COMMON NAMES:**

English	—	Long finned squid, white squid, winter squid
German	—	Lanschwanzkalmar
Spanish	—	Calamar
Italian	—	Calamaro
Japanese	—	やり烏賊 <i>Yariika</i>
French	—	Calmar

Long finned squid occur commonly from Massachusetts to North Carolina. They are distinguished from other local species by having a broader pen and longer fins. In addition, this species is generally smaller and has a thinner mantle wall. Long finned squid have ten arms or tentacles and a cigar shaped body with fins that equal one half the body length. This squid is available to the inshore fishery from spring through fall and is caught offshore in the winter.

**DISTRIBUTION:** Continental shelf, continental slope, and nearshore coastal waters.

**SIZE:** Average mantle length 5 inches (12.7 cm), total length 8 inches (20.3 cm).

**PRODUCT FORMS:** Fresh; whole. Frozen; whole. A variety of processed forms are available.

**MONKFISH**

**SCIENTIFIC NAME:** *Lophius americanus*

**COMMON NAMES:**

- English — Monkfish, anglerfish, goosefish, allmouth
- German — Seeteufel, angler
- Spanish — Rape
- Italian — Rana pescatrice, rospo, martino
- Japanese — Anko
- French — Baudroie

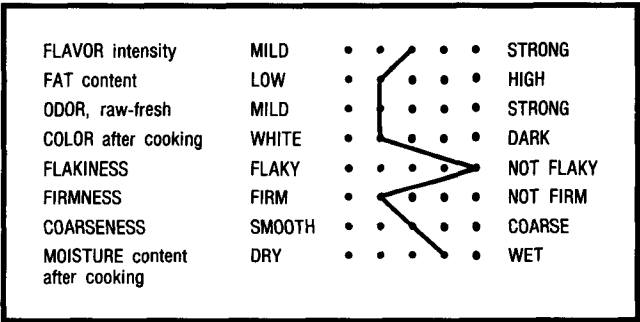

Monkfish is truly one of the ugliest fish in the sea. It has a huge head that tapers to a slender tail. Also known as poor man's lobster, anglerfish, bellyfish, goosefish and lotte, the monkfish has an exceptional flavor. Monkfish are harvested almost year round. Fishermen generally cut off the head and bring in only the tail section. Originally caught as a by-catch of the scallop fishery, the monkfish was originally exported to France and Northern Italy. The meat is white, lean and very firm. It is often compared to lobster. The texture of monkfish makes it ideal for kebobs, chowders and stir-fry dishes.

**DISTRIBUTION:** Continental shelf to nearshore coastal waters and bays.

**SIZE:** Maximum length 4 ft. (122 cm), weight 50 lbs. (22.5 kg).

**EDIBILITY PROFILE:**

**PRODUCT FORMS:** Fresh; headed and gutted, fillets. Frozen; headed and gutted, fillets.

## OCEAN QUAHOG

**SCIENTIFIC NAME:** *Arctica islandica*

**COMMON NAME:**

English	—	Ocean quahog
German	—	Islandmuschel
Spanish	—	Almeja*
Italian	—	Vongola*
Japanese	—	二枚貝 <i>Nimaigai</i> *
		*general term

Ocean quahogs have extremely brittle shells, which have a black or dark brown skin-like outer covering. Adult ocean quahogs measure from 3 to 6 inches across and have an average weight of 1/2 pound a piece. They live in deeper waters in areas from 100 to 250 feet deep. The meat of ocean quahogs is darker, tougher, and stronger in flavor compared to most clam species. They are usually canned and sold minced or chopped.

**DISTRIBUTION:** Continental shelf and nearshore coastal waters.

**SIZE:** Average length 3–5 inches (8–13 cm).

**PRODUCT FORMS:** Fresh; shucked. Frozen; shucked, minced. Canned; minced.

## OYSTER

**SCIENTIFIC NAME:** *Crassostrea virginica*

**COMMON NAME:**

English	—	Oyster
German	—	Auster
Spanish	—	Ostra, ostión
Italian	—	Ostrica
Japanese	—	Kaki
French	—	Huitre

Found in brackish waters, oysters inhabit the shallow waters of New Jersey's bays and estuaries. Oysters are harvested in fall and winter, but can be bought and enjoyed anytime. They have rough irregular shells that open and close by one adductor muscle and average 3 to 6 inches in length. The color of oyster meat varies with the color of the algae that the oyster is feeding upon, but the typical color is usually tan or cream. Red and green varieties are also found and many French gourmets actually prefer the green oyster.

**DISTRIBUTION:** Bays and estuaries.

**SIZE:** Length 3–7 inches (8–18 cm).

**PRODUCT FORMS:** Fresh; whole, shucked. Frozen; whole, shucked, breaded.

## RED HAKE

**SCIENTIFIC NAME:** *Urophycis chuss*

### COMMON NAMES:

English	—	Red hake, ling, squirrel hake
German	—	Gabeldorsch
Spanish	—	Locha
Italian	—	Musdea atlantica
French	—	Merluche – ecureuil

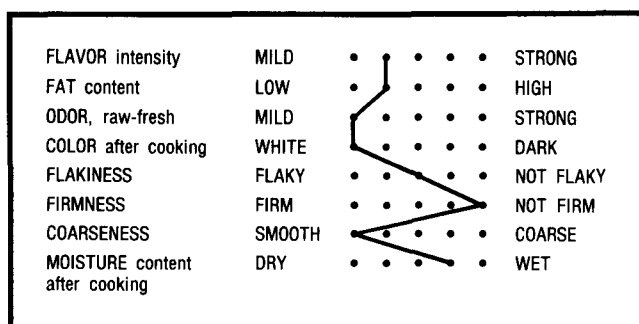

Red hake are small slender fish that average one to four pounds. Red hake are close relatives of the cod, but are more slender, smaller and softer bodied. Red hake is also known as ling. This species feeds on small crustaceans, squid and small finfish. They use their ventral feelers to locate food. Red hake is most often harvested by trawling and recent research indicates that this species may be well suited as a feedstock for surimi-based products.

**DISTRIBUTION:** Continental shelf, continental slope and nearshore coastal waters.

**SIZE:** Maximum length 30 inches (76 cm); maximum weight 7 lbs. (3.2 kg).

### EDIBILITY PROFILE:

**PRODUCT FORMS:** Fresh; whole, headed and gutted, fillets. Frozen; whole, headed and gutted, fillets. Potential for frozen block.

## SCUP

**SCIENTIFIC NAME:** *Stenostomus chrysops*

### COMMON NAMES:

English	—	Scup, porgy, paugy, fair maid
German	—	Skap, amerikanischer, brasse
Spanish	—	Espárido*
Italian	—	Pagro, pagello
Japanese	—	鯛 <i>Tai</i> *
French	—	Dorade
		*general term

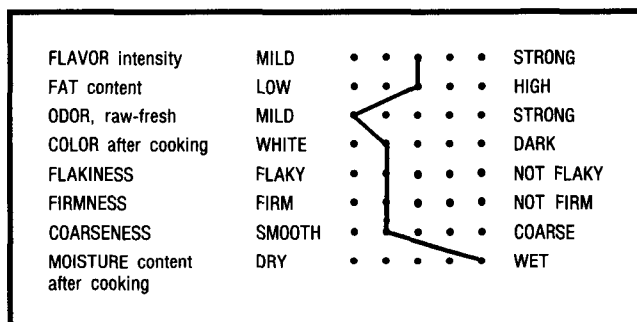

Porgies characteristically stay close to shore. They tend to concentrate over rocky and smooth bottoms, and live close to the bottom. They feed on small bottom dwelling invertebrates and young finfish. Travelling in schools, they migrate offshore and southward in fall. They are harvested by otter trawl, pound nets, purse seines, and traps. The meat is light in color, fishy with a mild but distinct taste.

**DISTRIBUTION:** Continental shelf, nearshore coastal waters, polyhaline zone of estuaries.

**SIZE:** Maximum length 18 inches (46 cm); weight 4 lbs. (1.8 kg); average length 12–14 inches (30–35 cm); weight 1–2 lbs. (.5–1 kg).

### EDIBILITY PROFILE:

**PRODUCT FORMS:** Fresh; whole, headed and gutted. Frozen; whole, headed and gutted.

## SEA SCALLOP

**SCIENTIFIC NAME:** *Placopecten magellanicus*

**COMMON NAME:**

English	—	Sea scallop
German	—	Kamm-muschel, pilger-muscher
Spanish	—	Vieira
Italian	—	Ventaglio-pettine, maggiore
Japanese	—	Hotategai
French	—	Coquille St. Jacques

Sea scallops can be found in deep ocean waters off our coast. Scallops, unlike clams, oysters and mussels can actually swim by means of jet propulsion. They take in water and rapidly jet it out to provide for their erratic swimming motion. Although the entire content of the scallop is edible, it's the firm meaty muscle that's marketed and most enjoyed by consumers. Fresh scallop meat is firm and lean with a delicate flavor and a sweet odor like that of lobster. Scallops are naturally a creamy white color, but variations such as pink and tan are perfectly acceptable.

**DISTRIBUTION:** Continental shelf.

**SIZE:** Average length 5–8 inches (13–20 cm).

**PRODUCT FORMS:** Fresh; shucked. Frozen; shucked, breaded.

## SHORT FINNED SQUID

**SCIENTIFIC NAME:** *Illex illecebrosus*

**COMMON NAMES:**

English	—	Short finned squid, red squid, summer squid
German	—	Kurzschwanzkalmer
Spanish	—	Pota
Italian	—	Totano
Japanese	—	まつ馬賊 <i>Matsuika</i>

Short finned squid is a more northern species and occurs from the Maritime Provinces to New Jersey. This species has a slender pen and its fins are one third the length of the mantle. The short finned squid reaches a larger size and usually sells for less, than the long finned squid. This squid was once used almost exclusively for bait but its growing popularity with American consumers has created interest and activity in a direct market. This species is harvested locally in the summer and fall.

**DISTRIBUTION:** Continental shelf, continental slope and edge of Gulf Stream.

**SIZE:** Up to 18 inches (46 cm).

**PRODUCT FORMS:** Fresh; whole. Frozen; whole. A variety of processed forms are available.

## SILVER HAKE

**SCIENTIFIC NAME:** *Merluccius bilinearis*

### COMMON NAMES:

English	—	Silver hake, whiting, New England hake
German	—	Nordamerikanischer, Seeheeht
Spanish	—	Merluza atlántica
Italian	—	Nasello atlantico
French	—	Merlu argenté bardot

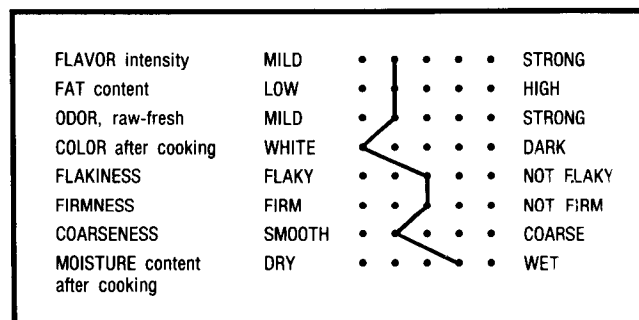

Silver hake or whiting are close relatives of the cod but are smaller and softer bodied. Whiting are bottom dwellers during the day but move to the surface to feed at night. Their diet consists primarily of small schooling fish such as herring, mackerel, and silversides. Whiting are sometimes called frostfish because often a quick freeze traps them in shallow water and they wash up on the beach, a gift from the sea. Whiting are primarily harvested by trawling. Locally harvested whiting is generally sold fresh. Most frozen product that reaches the market is imported.

**DISTRIBUTION:** Continental shelf, continental slope, nearshore coastal waters.

**SIZE:** Maximum length 2-1/2 ft. (76 cm), maximum weight 5 pounds (2.25 kg); usually 14 inches (36 cm).

### EDIBILITY PROFILE:

**PRODUCT FORMS:** Fresh; whole, headed and gutted, fillets. Frozen; whole, headed and gutted, fillets. Potential for frozen blocks.

## SKIPJACK

**SCIENTIFIC NAME:** *Katsuwonus pelamis*

### COMMON NAMES:

English	—	Skipjack, oceanic bonito, striped bonito
German	—	Echter Bonito
Spanish	—	Listado, barrilete
Italian	—	Tonnetto striato
Japanese	—	鰹 <i>Katsuo</i> *
French	—	Bonite `a ventre rayé *general term

Skipjack is a small tuna weighing between 4 and 25 pounds. Its meat is stronger flavored than the albacore and yellowfin. It can be distinguished by its parallel black to dusky stripes on the lower sides of its body. The fish is often marketed in Japan for sashimi. It can also be fried, baked or broiled. In dry form, it is served with the Hawaiian poi.

**DISTRIBUTION:** Continental shelf, occasional in nearshore coastal waters.

**SIZE:** Maximum length 30 inches (76 cm).

### EDIBILITY PROFILE:

FLAVOR intensity	MILD	• • •	•	STRONG
FAT content	LOW	• • •	•	HIGH
ODOR, raw-fresh	MILD	• • •	•	STRONG
COLOR after cooking	WHITE	• • •	•	DARK

**PRODUCT FORMS:** Fresh; gutted, fillets. Frozen; gutted, fillets. Canned.

## SMOOTH DOGFISH

**SCIENTIFIC NAME:** *Mustelus canis*

### COMMON NAMES:

English	—	Smooth dogfish, smooth dog, greyfish
German	—	Glatthai
Spanish	—	Musola
Italian	—	Palombo
Japanese	—	鰺*
French	—	É missole
		*general term

Smooth dogfish inhabit the coastal water areas of the middle and northern Atlantic states. The smooth dogfish grows to three or four feet and feeds on shellfish and crustaceans. It is often mistakenly called a sand shark because it is found near beaches or sandbars in the summer. The smooth dogfish can be distinguished by the rows of small white spots on its side and by the two sharp spines that protrude in front of its large dorsal or back fins. Dogfish is widely consumed in England as the fish in "fish and chips". Smoked dogfish bellies are also popular in Europe.

**DISTRIBUTION:** Continental shelf, nearshore coastal waters and bays.

**SIZE:** Maximum length 5 ft. (152 cm); average length 3–4 ft. (92–122 cm).

### EDIBILITY PROFILE:

FLAVOR intensity	MILD	• • • • •	STRONG
FAT content	LOW	• • • • •	HIGH
ODOR, raw-fresh	MILD	• • • • •	STRONG
COLOR after cooking	WHITE	• • • • •	DARK

**PRODUCT FORMS:** Fresh; whole, headed and gutted, fillets, belly meat. Frozen; whole, headed and gutted, fillets, belly meat.

## **SOFT CLAM**

**SCIENTIFIC NAME:** *Mya arenaria*

### **COMMON NAMES:**

English	—	Soft clam, steamer, long necked clam, piss clam
German	—	Sandklaffmuschel
Spanish	—	Almeja de rio
Italian	—	Vongola molle
Japanese	—	Onogai

The softshell clam has an elongated shell that is very thin and brittle. It cannot close tightly because its long neck extends beyond the shell. Soft clams burrow into beds and can be found in almost any bay, cove, inlet or mud flat along the shore. These clams are marketed under a variety of regional names including softshells, longnecks, belly clams, steamers, Ipswich or maninose clams.

**DISTRIBUTION:** Throughout bays and estuaries.

**SIZE:** Average length 3–4 inches (7–10 cm).

**PRODUCT FORMS:** Fresh; whole. Frozen; whole, raw meats, steamed meats.

## SPINY DOGFISH

**SCIENTIFIC NAME:** *Squalus acanthias*

### COMMON NAMES:

English	—	Spiny dogfish, dogfish, piked dogfish, greyfish
German	—	Dornhai, dornfisch
Spanish	—	Galludo, mielga
Italian	—	Gattuccio
Japanese	—	鮫 •
French	—	Aiguillat commun
		*general term

The spiny dogfish is named for its weapon of defense. Along the front margin of each dorsal fin is a long spine which stands upright when the shark curls its body into a bow. Spiny dogfish are small, slender bodied fish and average 2 to 3-1/2 feet long and 5 to 10 pounds in weight. They are slate gray above with grayish white sides and a white belly. On each side there is a row of small, white spots which fade with age. They are abundant off the Northeast coast in late spring, summer and fall. They spend their winters offshore in deeper waters. The meat of dogfish is white, firm and mild flavored.

**DISTRIBUTION:** Continental shelf, nearshore coastal waters.

**SIZE:** Maximum length 4 ft. (122 cm), weight 80 lbs. (9 kg). Average length 2-1/2 ft. (76 cm); weight 8 lbs. (3.6 kg).

### EDIBILITY PROFILE:

**PRODUCT FORMS:** Fresh; whole, headed and gutted, fillets, belly meats. Frozen; whole, headed and gutted, fillets, belly meats.

SUMMER FLOUNDER

SCIENTIFIC NAME: *Paralichthys dentatus*

COMMON NAMES:

- English — Summer flounder, fluke
- German — Flunder
- Spanish — Platija
- Italian — Rombo dentuto
- French — Cardeau d' été

The summer flounder or fluke is comparable to winter flounder in taste and texture although it's usually larger when it reaches market. The largest fish are often called doormats. These fish are most available during the summer months when they frequent shallow water. They are left-sided, large mouthed and have an arched lateral line. Large fish are sold in quarter-cut fillets or steaks.

**DISTRIBUTION:** Continental shelf, inshore coastal waters, bays and polyhaline zone of estuaries.

**SIZE:** Maximum length 4 ft. (122 cm), weight 21 lbs. (9.5 kg); usually 5 to 10 lbs. (2.25–4.5 kg).

EDIBILITY PROFILE:

**PRODUCT FORMS:** Fresh; whole, headed and gutted or fillets. Frozen; whole, headed and gutted or fillets.

## **SURF CLAM**

**SCIENTIFIC NAME:** *Spisula solidissima*

**COMMON NAME:**

English	—	Surf clam
German	—	Sandklaffmuschel
Spanish	—	Almega*
Italian	—	Vongole*
Japanese	—	かき <i>Nimaigai</i> *
		*general term

Surf clams have oval shells and grow to eight inches across. They prefer gravel or coarser substrates from subtidal areas to 120 feet deep. Surf clams are harvested by hydraulic dredge and shucked by hand or machine. The tongue comprises almost one-half of the shucked meat and is prepared by breading and frying it. The remainder of this clam is used for minced clam meat or in clam chowder.

**DISTRIBUTION:** Nearshore coastal waters.

**SIZE:** Up to 8 inches (20 cm) in length; 6 inches (16 cm) in width.

**PRODUCT FORMS:** Fresh; shucked. Frozen; shucked, strips, breaded strips. Canned, minced.

## SWORDFISH

**SCIENTIFIC NAME:** *Xiphias gladius*

**COMMON NAME:**

English	—	Swordfish
German	—	Schwertfisch
Spanish	—	Pez espada
Italian	—	Pesce spada
Japanese	—	目かじき <i>Mekajiki</i>
French	—	Espadon

Swordfish are named for their long upper jaw. The record swordfish landed weighed in at 1,182 pounds. The average commercial catch is between 50 and 400 pounds. Swordfish eat smaller fish which they catch by thrashing their sword around within a school. The fish has a large commercial and recreational following. Swordfish are usually marketed as fresh or frozen steaks. Mako shark because of its similar taste and texture is sometimes illegally marketed as swordfish. Mako has a sandpapery skin and lacks the distinct eye whorls that can be seen in a cross section of swordfish. Swordfish from New Jersey is available almost year round.

**DISTRIBUTION:** Continental shelf and open ocean waters.

**SIZE:** Maximum length 16 ft. Weight 1100 pounds. Average weight 200–300 lbs.

**EDIBILITY PROFILE:**

**PRODUCT FORMS:** Fresh; gutted, fillets, steaks. Frozen; gutted, fillets, steaks. Canned.

## TAUTOG

**SCIENTIFIC NAME:** *Tautoga onitis*

### COMMON NAMES:

English	—	Tautog, blackfish, whitechin, oyster fish
German	—	Lipp fisch*
Spanish	—	Pescado negruzco
Italian	—	Labrido
Japanese	—	べら <i>Bera</i> *
French	—	Tautogue noir *general term

Tautog appear in New Jersey waters during the warmer months. November through April, they drop to deeper waters and spend the winter hibernating among rocks and crevices, moving and feeding very little. Tautog feed on a variety of mollusks and crustaceans. Although the commercial fishery for tautog has never been significant, there is a sportfishery.

The meat of the tautog is off-white and firm textured with a mild flavor.

**DISTRIBUTION:** Continental shelf, nearshore coastal waters and polyhaline zones of estuaries.

**SIZE:** Maximum length 3 ft. (92 cm), weight 22 lbs. (10 kg); rare over 11 lbs. (5 kg).

### EDIBILITY PROFILE:

FLAVOR intensity	MILD	•	•	•	•	•	STRONG
FAT content	LOW	•	•	•	•	•	HIGH
ODOR, raw-fresh	MILD	•	•	•	•	•	STRONG
COLOR after cooking	WHITE	•	•	•	•	•	DARK
FLAKINESS	FLAKY	•	•	•	•	•	NOT FLAKY
FIRMNESS	FIRM	•	•	•	•	•	NOT FIRM
COARSENESS	SMOOTH	•	•	•	•	•	COARSE
MOISTURE content after cooking	DRY	•	•	•	•	•	WET

**PRODUCT FORMS:** Fresh; whole, headed and gutted, fillets. Frozen; whole, headed and gutted, fillets.

TILE FISH

SCIENTIFIC NAME: *Lopholatilus chamaeleonticeps*

COMMON NAME:

- English — Tilefish
- Japanese — 甘鯛 *Amadai*
- French — Tile

Tilefish are a deep water fish that seem to mysteriously appear and disappear along the Continental Slope. Because they are a deep water fish, the recreational fishery is limited. Tilefish have a firm but tender white meat that is sometimes compared to scallops and lobster. This is largely due to their diet which consists primarily of crabs and other shellfish. They can be cooked in a variety of ways including poaching, broiling, and baking. The meat makes excellent sashimi. Spring is the peak season for tilefish off the Jersey coast. Generally sold fresh, either whole, filleted or steaked, the meat is well worth trying.

**DISTRIBUTION:** Outer continental shelf and upper part of continental slope, primarily between 100–240 meters.

**SIZE:** Maximum weight 50 lbs. (23 kg); average weight 5–10 lbs. (2.2–4.5 kg).

EDIBILITY PROFILE:

**PRODUCT FORMS:** Fresh; gutted, headed and gutted, fillets. Frozen; gutted, headed and gutted, fillets.

## WINTER FLOUNDER

**SCIENTIFIC NAME:** *Pseudopleuronectes americanus*

### COMMON NAMES:

English	—	Winter flounder, blackback lemon sole
German	—	Flunder
Spanish	—	Mendo limon
Italian	—	Sogliola limanda
French	—	Plie rouge

The winter or blackback flounder is a right-eyed flatfish with a small mouth like the yellowtail flounder, but the straight lateral line over its pectoral fin has no arch, and it has a thicker body and more widely spaced eyes. Winter flounder are the most common shallow water flatfish in North America. When the fish reach sizes over 3-1/2 lbs., they are often marketed under the name lemon sole. Winter flounder supports a large sportfishery as well as one of the most important commercial fisheries on the East Coast. Winter flounder is one of the thickest and meatiest of the East Coast flounders. The meat of smaller fish sometimes has a grayish tint which whitens with cooking. During the spawning season, the roe is sometimes marketed.

**DISTRIBUTION:** Continental shelf, nearshore coastal waters, bays, and mesohaline and polyhaline zones of estuaries.

**SIZE:** Maximum length 2 ft. (61 cm), weight 8 lbs. (3.6 kg); usually 12 to 15 inches (30.5–38 cm) and 1-1/2–2 lbs. (.7–.9 kg).

**YELLOWFIN TUNA**

**SCIENTIFIC NAME:** *Thunnus albacares*

**COMMON NAME:**

- English — Yellowfin tuna
- German — Gelbflossenthun
- Spanish — Rabil
- Italian — Tonno albacora
- Japanese — 黄肌鰯 *Kiwadamaguro*
- French — Albacore

Yellowfin has long bright yellow dorsal and anal fins and a yellow stripe down the side. Usually yellowfin weigh in between 30 and 100 pounds but can reach 300 pounds in some instances. The meat of the yellowfin is darker than albacore but lighter than bluefin. They are best when brined before cooking. Yellowfin tuna is the base of the California tuna industry.

**DISTRIBUTION:** Continental shelf, continental slope and open ocean waters.

**SIZE:** Up to 300 lbs. (135 kg).

**EDIBILITY PROFILE:**

**PRODUCT FORMS:** Fresh; gutted, fillets or steaks. Frozen; gutted, fillets or steaks. Canned.

## YELLOWTAIL FLOUNDER

**SCIENTIFIC NAME:** *Limanda ferruginea*

### COMMON NAMES:

English	—	Yellowtail flounder, rusty flounder
German	—	Kliesch, scharb
Spanish	—	Limanda
Italian	—	Limanda
French	—	Limande `a queue jaune

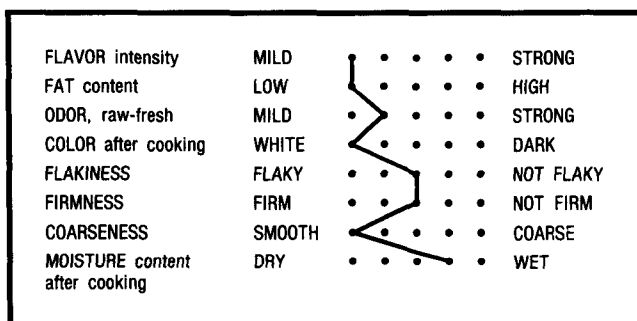

The yellowtail flounder is characterized by its small mouth, pointed snout, and thin body, which has a definite arch in the lateral line over the pectoral fin. The body shape is nearly oval. Its color varies from grayish olive green to reddish brown, and the fish has large rusty spots and a yellow tail fin on the belly side. Yellowtail has a very delicate flavor. Yellowtail usually inhabit deeper water from 90 to 240 feet and are not in great demand by sportsfishermen.

**DISTRIBUTION:** Continental shelf, coastal waters; occasionally in polyhaline zone of estuaries (young).

**SIZE:** Maximum length 2 ft. (61 cm).

### EDIBILITY PROFILE:

**PRODUCT FORMS:** Fresh; whole, headed and gutted, fillets. Frozen; whole, headed and gutted, fillets.
